0.1	<div>37 3</div> <div>38 4</div> <div>39 3</div> <div>40 1, 8</div> <div>41 0</div> <div>41 5</div> <div>11 1 = 1.11</div> <div>$(\Delta t)_{\text{avg}} \approx 3.994$</div>		≈ 0.125	≈ 3.343	≈ 0.036

I_{net}

$$\begin{aligned}
 I_{\text{net,th}} &= 0.5m_d r_d^2 + m_p r_p^2 \\
 &= 0.5(1.3)(0.125)^2 + 0.1(0.0375)^2 \\
 &\approx 0.01 \text{ N} \cdot \text{m}
 \end{aligned}$$

$$\begin{aligned}
 I_{\text{net,exp}} &\approx 0.01 \\
 \% \text{ error} &= \left| \frac{I_{\text{net,th}} - I_{\text{net,exp}}}{I_{\text{net,exp}}} \right| \approx 1.25\%
 \end{aligned}$$

The reason that the least-squares regression line relating τ_{net} to α does not display direct variation is that a lack of angular acceleration may occur when torque is not great enough to overcome friction.
